June 3rd, 2010 by Connie Roberts

Kerasal One Step Exfoliating Moisturizer Therapy is a richly concentrated foot ointment. Kerasal is the Number 1 Podiatrist Foot Softener and America's Number 1 selling dry foot therapy. Kerasal One Step Exfoliating Moisturizer softens feet and calluses, repairs cracked heels and supplies moisture to new cells.

Directions for Use:

1. Wash and dry feet thoroughly
2. Use a small amount to gently massage into skin
3. Apply daily
4. You should see results in about 7 days
5. Wear a pair of cotton socks after applying for faster results

My Review: My heels are not only dry and rough, they are cracked. I have very dry skin because of Sjogren's Syndrome. I use moisturizer – but not on my feet, wrong, wrong, wrong! Plus I walk around my house barefoot all the time. We have hardwood and tile floors so this doesn't help either. When I received the [Kerasal](#) One Step Moisturizer, I was very skeptical that it would work for me.

When I opened the tube, I was surprised by the consistency of the moisturizer. It is thick, but not greasy. There is no odor at all and it was as if my feet soaked it up as soon as I put it on. I began to see a difference by day 3 – less flaking and a smoother appearance. By day 9 the cracks were gone. My feet were soft to the touch and they looked healthy. I'm ready for sandals now!

Buy It: Kerasal One Step Exfoliating Moisturizing Therapy is available in drug stores, general merchandise stores and online.
